## HOW TO READ THIS CATALOG

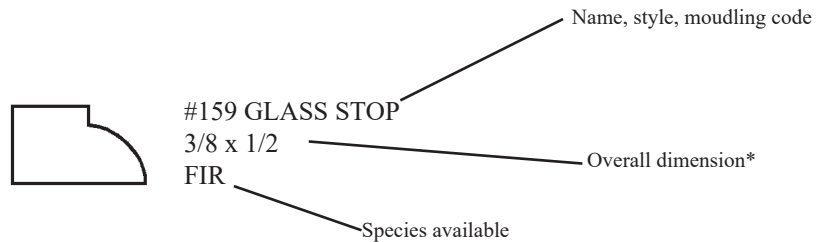

This section is for customers who are browsing the mouldings we keep in stock at our yard. We specialize in many older style homes as well as contemporary. If you are looking to match something this is an excellent place to start as we have dozens of profiles to choose from for many applications, whether trying to match existing or installing new.

This catalog can be printed online or you can pick up a physical copy in our hardware store as well as view all the physical samples. If need be, you can print a single page from our online catalog to quickly match up profile and dimension from your home or office. Be sure to set your printer to "Print Actual Size" to get a better scale. While these side profiles are to scale please note they are not perfect. Ideally you would want to match up physical samples to each other for best comparison.

Our profiles are broken down into categories of style and application. Please refer to the table of contents to quickly find your specific profile. These profiles come in a variety of species including Hemlock, MDF, Poplar, Cedar, Finger Jointed Primed Pine, Douglas Fir, Mahogany, and Red Oak.

The species that these profile come in is listed next to each side profile as well as the dimension. If it comes in multiple species it will be listed as such. Please note we only stock the species listed for each profile, however, these profiles can be made in different species. Also, in the MDF and F/J Primed mouldings every so often supply cannot keep up with demand, in the event that our suppliers cannot get our usual profile we will source from another vendor. However, profile and dimension may differ slightly.

Questions about lengths, quantities, special ordering different species, or are ready to place an order please call, email, or come in person to talk to an associate. Reference the name, style, or moulding code to our sales staff so we can better assist you.

\*+/- 1/32" on overall dimension
